

WISI DRX 9002

FLEX SWITCH distributor, 2-fold for two satellites

Description

The DRX 9002 is a passive 2-way distributor for distributing signals from two satellites and terrestrial signals from one trunk line to two lines. Due to its low distribution attenuation, the distributor is ideal for the construction of multiswitch cascades. If the optional DRP 1533 power supply unit is operated on DRX 9002, the connected LNBs are supplied with DC operating voltage. An additional transmission of this operating voltage to the master line for feeding downstream amplifiers is possible via an integrated switch.

At a glance:

- Passive 2-way splitter for two satellite and terrestrial signals
- Switchable DC bypass for LNB powering
- High screening efficiency according to Class A
- Compact dimensions paired with installation friendly distance between the F connectors
- Made in Germany
