

WISI GT VSECX

Software option for Philips Vsecure scrambler

Description

Philips VSecure Scrambling in the TANGRAM is enabled by the Software option GTVSEC. The GTVSEC software option allows you to use the TANGRAM as a scrambler for encryption of the output services with an fully integrated conditional access system (CAS). Together with the TANGRAM scrambler and a TV set or Set-top-Box that supports Vsecure descramling you can built your solution for protect the copyrighted content. The extension SW option GTVSECX enables the maximum number of scrambled service.

At a glance:

- Philips VSecure Scrambling
- Excellent Pay-TV Content Protection solution
- Descrambling without CAM and Smartcard
- Integrated conditional access system (CAS)
- PID level scrambling
- Support scrambling of HEVC, MPEG-4 and MPEG-2 in SD or HD
