

WISI GTEDOL

Software option for Dolby Digital audio decoding

Description

The TANGRAM Dolby decoding at GT2100 is enabled by the SW option GTEDOL. The Dolby decoding allows reception and decoding of one Dolby audio, to support the different audio output formats for analogue (PAL and SECAM) modulation. The GTEDOL software option requires a Dolby enabled TANGRAM HW.

At a glance:

- Decoding of one Dolby audio input at GT2100
- Allows audio output in analogue modulation in mono, nicam stereo and A2 stereo

Scope of delivery

- After buying the software option you can download the entitlement file which includes the software option on www.wisiconnect.tv.
